

MEMORANDUM OF UNDERSTANDING ON COOPERATION

between

ASECAP

and

EasyWay

OCTOBER 2009

Background

Intelligent Transport Systems and Services (ITS) are an important instrument for the 27 EU Member States and for EU to reach their goals in a smart, safe and environmentally friendly sustainable mobility.

ASECAP members have played a crucial role in the developments related to the Euro-Regional ITS Projects (MIP 2001-2006) in the various EU regions.

The EU institutions have decided to examine a well coordinated structure using both bottom up and top down approaches in order to identify the regional priorities and the technological maturity in the various ITS domains. This activity falls entirely under the ITS Action Plan in EU.

EasyWay is an important program - instrument to move to the needed directions with the active involvement of the EU Member States and all the relevant stakeholders.

Taking into account the above, EasyWay and ASECAP have agreed on the present MoU aimed at the establishment of a well regulated cooperation subject to applicable internal rules of both sides.

Based on the present MoU EasyWay and ASECAP will create the necessary vehicles-structures including -if necessary- task forces on specific issues. A possible indicative list of issues is included in the attached annex.

This cooperation reflects the desires of both parties for joint actions in the above ITS fields.

FOR ASECAP

The President

FOR EASYWAY

The President
